

SecureAware API

- Do you want an effective information security management system with full integration within your other systems?
- Do you use SharePoint, or a similar intranet solution, and do you want to make your information security initiatives visible here?
- Do you wish to communicate your information security directives to users through the applications they use most?

SecureAware API is an application programming interface which enables other programs and applications to extract data and information from SecureAware and communicate this information in a context other than through SecureAware itself.

With SecureAware API, you can present your IT Security Handbook through your intranet – either in its entirety or selected sections only. Configure your IT systems to communicate specific security information directly within user-relevant applications. For example, you can arrange for a help text to be shown upon password change aimed at orientating users about company-specific rules governing change of password. With SecureAware API, all this can be managed in one place.

SecureAware API allows integration of your policies, rules and procedures.

Neupart, an ISO 27001 certified company, is the leading provider of IT GRC management solutions. Neupart helps enterprises manage complex regulatory mandates and risks with an all-in-one platform for compliance, best practices and awareness. Whether you need to comply with PCI, ISO27000 or manage evolving business risks, Neupart allows you to respond effectively and "future proof" your compliance program. Denmark-based Neupart has subsidiaries in Germany and USA and has representatives across the world with a customer portfolio covering a wide range of private enterprises and governmental agencies. www.neupart.com
