

Risk TNG

Risk TNG is the next generation risk management tool from SecureAware, with all the flexibility and features required to conduct professional risk management. Based on ISO 27005 and NIST SP800-30, as well as the real life experiences of risk management professionals, Risk TNG offers a wide range of features, including:

Asset Inventory for any asset type, including 'BIA-friendly' assets, such as IT services and business processes, as well as tangible assets such as servers, facilities etc.

Structured, global threat catalogue to manage relevance and frequencies of threat or groups of threats.

Impact assessments and security control assessments at three different levels of your choice: Quick, detailed, or questionnaire.

Web services API allows for integration and data exchange with your other applications, and for enhanced reporting.

Organizations can now perform their risk assessments faster, while maintaining high risk result accuracy.

With SecureAware Risk TNG, IT risk assessments are simpler.

Risk TNG Benefits

Hierarchical threat catalog makes it easy and manageable for an organization to prioritize risks based upon several criteria.

A pre-defined set of risk calculations based upon relevance to different types of assets.

A set of threat appraisal and default values reduces the number of questionnaires for your organization.

Ability to conduct threat-based risk assessments.

Reports can be generated in custom "dashboards" representing sets of assets, risk and project status.

PDF reports support a wide range of graphical elements and text options.

New user interface supports better ergonomics and faster data input / configuration.

Risk values work through defined dependencies in a corporate-wide asset database.
